The Markar® Stainless Steel Wide Throw hinges provide an excellent solution in applications where additional clearance is required between the frame/wall and the door when opened 180 degrees. This is typically needed to clear custom brick moldings, and special door and frame designs.

In order to provide an array of standard size configurations, Markar® has designed an ordering matrix that encompasses the most commonly requested sizes. Creating this range of standard configurations will help in expediting the ordering process and reduce lead times for our valued customers.

FM300 Wide throws that are above 2" clearance require support angles.

**FM300WT - XX - XX - XX**
