Added reinforcement for Adjusta-Screw Assembly

For proper use of the Adjusta-Screw Assembly when using Markar's EG model hinges for a hollow metal door application, we strongly suggest reinforcement at the hinge side of the door.

This added reinforcement will ensure the correct amount of material for threading the Adjusta-Screw, providing the assembly strength needed to last for the life of the door.

Important: *The additional reinforcement must be added to the door at the time of manufacture - please take this into consideration when ordering your doors. This added reinforcement is only appropriate for the Adjusta-Screw assembly.*
